Trav. of Zaval'skaya Laboratoriya (USSR) 1956, v. 22
[no. 12] p. 1406-1407.

The adsorption bands of the components are condensed in the chromatographic analysis which permits their separation. In the desorption with air (115 ml./min.) at 120° benzene is not desorbed, at 245° toluene and benzene are desorbed quantitatively but not separated, but at 160° they are quantitatively desorbed and separated. The identification of the components was based on the measurement of the combustion heat effects of the separated components. The accuracy of (Chemistry--Analytical, TT, v. 5, no. 7) (over)
